Graduate or Undergraduate Students in Sciences or Education!
(or any major, with an interest in science and/or working with children)

Would you like to:

- Make a meaningful difference in Madison elementary schools?
- Share the excitement of discovery with children – especially those who might not be succeeding in school?
- Collaborate with elementary teachers to help them develop skills in science and learn teaching skills from them?

The ARMS program’s “Young Science Scholars” initiative needs UW students who can volunteer in classrooms for one hour per week and spend an additional hour planning science activities with the teacher. UW students can participate through enrollment in “Engage Children in Science,” a 2 credit course (offered fall and spring) or can gain internship credits. To learn more contact Dolly Ledin at daledin@wisc.edu.
